Claim Rejections - 35 USC § 112

Claims 11 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 11 is confusing, since it is a method claim dependent on a system claim (7). Suggest that claim 7 depends from claim 10.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 1-11 are rejected under 35 U.S.C. § 103 as being unpatentable over Frame et al in view of Sakata. Frame et al discloses an aluminum piston (12) in a steel cylinder having a piston ring (14) in a piston groove (18), wherein the piston ring has a thermal set resin coating (32) on a lower surface, wherein the thermal set resin includes PTFE; but does not disclose that the coating is a polyaryletherketone polymer.

Sakata teaches, for a piston ring including a synthetic resin, the equivalence of using either PTFE or PEEK (e.g. column 1 line 33-38) as part of a piston ring.

Encyclopedia of Chemical Technology teaches, that a polyaryletherketone polymer includes PEEK (e.g. page 2 first full paragraph).

Since Frame et al discloses a piston ring with PTFE; and Sakata teaches the equivalence of using either PTFE or PEEK as part of a piston ring, it would have been obvious at the time the invention was made to one having ordinary skill in the art to

Art Unit: 3745

replace the PTFE in the coating of Frame et al with PEEK, as taught by Sakata, as a matter of engineering expediency.

Since PEEK is included in the class of polyaryletherketone polymers (as disclosed by Encyclopedia of Chemical Technology), it meets the limitations of the claimed invention.
